

PNEUMATIC HYDRAULIC UNITS

Pneumatic air pumps are the right choice to many applications due to their excellent power-weight ratio. Our wide range of models can offer a right air pump for any needs. Our power packs are always equipped with an accurate pressure regulator (70 – 700 bar), a calibrated 1.0 gauge and a 4-way valve. A remote control with 5 m wire comes as standard.

HY-AIR

A high-output pneumatic hydraulic unit that is also well suited for the simultaneous operation of multiple wrenches. Its compact size makes it easy to transport as needed. Simple control devices ensure fast operation with the pump. Weight: 22 kg.

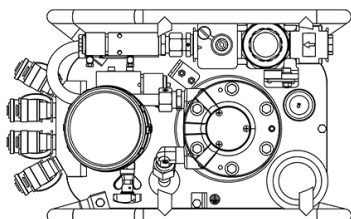

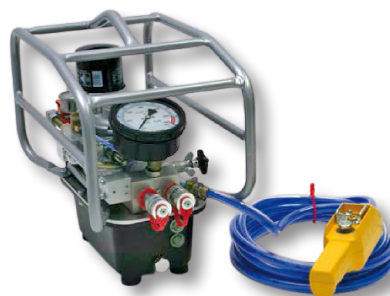

TWIN AIR

Equipped with a large oil reservoir, the TWIN-AIR enables the simultaneous use of up to four tools. This powerful hydraulic power pack also includes wheels as standard, making it easier to move from place to place. Weight: 44 kg.

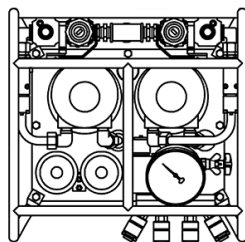

MINI AIR

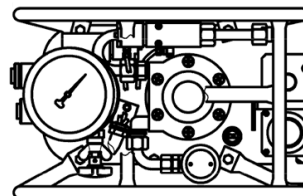

An extremely compact and lightweight pneumatic hydraulic unit that is particularly well suited for maintenance work due to its low weight and small size. A simple remote control includes only one operating button, significantly speeding up and facilitating pump operation. Also available with dual tool output. Weight: 16 kg.
