

VECTOR ELECTRIC HYDRAULIC PUMP

The Vector hydraulic pump series brings the use of hydraulic wrenches into a new era with its simplicity. Creating tightening programs has been made extremely easy, as Vector comes pre-programmed with data for all HYTORC hydraulic torque wrenches and their pressure charts.

VECTOR

The VECTOR Electric Hydraulic Pump combines power and convenience to speed up bolting jobs. Its 4-stage high-speed flow motor delivers quick, efficient performance. There are Manual, Fully Automatic, and Fully Automatic with Documentation packages so you can upgrade without purchasing a new unit.

The pump's LCD digital pendant remote makes operation simple—select your tool and torque value, press a button, and let it do all the work. You can power up to 4 torque tools simultaneously streamlining operations. Built for durability, the VECTOR performs reliably in any environment and simplifies documentation with easy USB data exports.

VECTOR MINI

The smaller Vector Mini offers nearly all the same features as the Vector but in a significantly more compact size. This makes the Vector Mini an excellent choice for tasks where the pump needs to be easily portable.

The Vector's user-friendly remote control and its bright display provide the user with all the essential information about the tightening process in real-time.
